                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ò
                                                                            The invention relates to a novel DNA vaccine against pathogens that affect pets and sports animals comprises a plasmid containing a sequence, expressible in vivo, that encodes an immunogen from the relevant pathogen and a cationic lipid containing a quaternary ammonium salt, particularly N-(2-hydroxypethyl)-N-M-dimethyl-2,3-bis(tetradecyloxy)-1-propanammonium (DMRIE). The immunogens are particularly taken from canine distemper virus (CHV), canine parainfiluenza virus type 1 (FHV-1), equine herpes virus type 1 (EHV-1), equine herpes virus type 1 (EHV-1), and EHV type 4 (EHV-4). The method may also include the use of a immunogenic stimulation factor especially a granulocyte-macrophage colony stimulation factor especially a granulocyte-macrophage the vaccines, which may be multivalent, are particularly used to protect dogs, cats and horses against bacterial and viral diseases, particularly those caused by the paramyxoviridae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           120

This sequence represents the gene encoding a horse granulocyte-macrophage colony stimulating factor (GM-CSF). The gene was isolated from horse lymphocytes using a reverse transcriptase PCR method with primers ARF28954-AAF28950. GM-CSF induces colony formation in various types of blood cells and particularly induces cytotoxicity of macrophages; ciffinited and causes recruitment of blood cells and particularly induces cytotoxicity of macrophages; compositions for horse, e.g. for protection seems recruitment of protein itself, are useful as adjuvants in immunogenic or vaccinating compositions for horses, e.g. for protection against equine herpes, tetanus, Borrelia burgdorferi, rabies etc. Also as non-specific stimulators of the immune system. In a specific example, plasmid pJP097, containing the sequence for equine GM-CSF was used to transform CHO-K1 cells and the transformants grown for 18 He hours. The culture supernatant was then added to culture medium being used to grow porcine bone marrow cells. After 14 days, the mean number of colonies per culture box was 12-15, compared with none for cells grown in absence of GM-CSF. Equine GM-CSF allows a reduction in the amount of immunogenic/vaccinating component required, and may induce a response in enimals that would otherwise be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CGCCAACCCAGCCCTGTCACTCGGCCCTGGCATGTGGATGCCATCAAGGAGGCCCTG 120

recombinant gamma-interferon, a cytokine-like molecule. The ovine cytokines will be useful in the intensive livestock industries such as live animal export trade, feed-lots and intensive rearing industries, where animals are subjected to great environmental challenge with infectious diseases, partic. respiratory infections, and are more prone to immunodepressive effects. The cytokines may be used for treatment or prophylaxis to maintain, stimulate or enhance immunoresponsiveness. They may also be useful as natural adjuvants for vaccines for sheep and cattle. See also AAQ24293-305, AAQ42311-15, AAQ24317-18 and AAQ25857-58. (Updated on 25-MAR-2003 to correct PA field.)

allegies, tumours, inflammation and graft rejection, and to increase the response from a co-administered antigen. The nucleotide sequences can also be used for the recombinant production of a protein, while nucleotide fragments are useful as probes, as amplification primers and as sources of inhibitory therapeutics (e.g., antisense oligonucleotides). The proteins may be used to raise antibodies and to screen for modulators of activity, while the antibodies may be used in detection, and in drug
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequences AAZ55575-Z5580 represent cDNA sequences encoding feline granulocyte macrophage colony-stimulating factor (GMCSF). The invention relates to canine interleukin-4 (IL-4), canine or feline Flt-3 ligand, canine or feline CD40, canine or feline CD154 (CD40 ligand), canine IL-5, canine IL-13, feline interferon-alpha (IRP-alpha) and feline GMCSF, and nucleotides which encode these immunoregulatory proteins. The proteins, their associated nucleic acids, specific antibodies and inhibitors may be used as vaccines for therapeutic or prophylactic regulation of an immune response in animals (particularly cats, dogs, horses and humans). They may be used to treat autoimmune or infectious diseases including
Granulocyte macrophage colony-stimulating factor; GMCSF; antibody; feline; inhibitor; immune response; immunoregulation; tumour; cancer; autoimmune disease; vaccine; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Nucleic acids encoding immunoregulatory proteins from cats or dogs, useful for treating or preventing e.g. tumors or autoimmune disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             .;

                                                                                                                                                                                                                                                                ò
                                                                                                                   셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a novel DNA vaccine against pathogens that affect pets and sports animals comprises a plasmid containing a sequence, expressible in vivo, that encodes an immunogen from the relevant pathogen and a cationic lipid containing a quaternary ammonium salt, particularly N-(2-hydroxyethyl)-N,N-dimethyl-2,3-bis(tetradecyloxy)-1-propanammonium (DNRIE). The immunogens are particularly taken from canine distemper virus (CBV), canine parainfluenza virus type 2 (CPL-2), canine herpes virus type 1 (FHV-1), equine herpes virus type 1 (FHV-1), equine herpes virus type 1 (EHV-4). The method may also include the use of a immunogenic stimulation factor especially a granulocyte-macrophage colony stimulation factor especially a granulocyte-macrophage colony stimulation factor especially a granulocyte-macrophage colony stimulation factor especially a granulocyte-macrophage colony stimulation factor especially a granulocyte-macrophage colony stimulation factor especially a granulocyte accines, which may be multivalent, are particularly uses to protect dogs, cats and horses against bacterial and viral diseases, particularly the quaternary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAAAGTTTCAAAAAGAACCTGAAGGATTTTCTGTTTGAGATCCCGTTTGACTGCTGGAAG 420
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ammonium salt provide a better immune response and thus more efficient protection, particularly when administered subcutancously. This sequence represents the gene encoding a feline GM-CSF used in the invention. (Updated on 11-SEP-2003 to standardise OS field)

Sequences AAZ55575-Z5580 represent cDNA sequences encoding feline
granulocyte macrophage colony-stimulating factor (GMCSF). The invention
relates to canine interleukin-4 (IL-4), canine or feline Flt-3 ligand,
canine or feline CD40, canine or feline CD154 (CD40 ligand), canine IL-5,
canine IL-13, feline interferon-alpha (IRN-alpha) and feline GMCSF, and
nucleotides which encode these immunoregulatory proteins. The proteins,
their associated nucleic acids, specific antibodies and inhibitors may be
created as vaccines for therapeutic or prophylactic regulation of an immune
response in animals (particularly cats, dogs, horses and humans). They
may be used to treat autoimmune or infectious diseases including
allergies, tumours, inflammation and graft rejection, and to increase the
response from a co-administered antigen. The nucleotide sequences can
also be used for the recombinant production of a protein, while
calso be used for the recombinant production of a protein, while
cas sources of inhibitory threapeuties (e.g., antisense alignoucleotides).
The proteins may be used to raise antibodies and to screen for modulators
of activity, while the antibodies may be used in detection, and in drug

The present invention relates to a method of optimising a coding sequence for expression of a protein, based on the amino acid sequence of the protein. This involves the use of a computer to generate a test sequence with m optimisation positions determined for a defined region, in which positions the codon usage is varied. The optimum codon usage at such positions is determined by means of a power function. The steps are relevanted with different regions of the sequence, with the optimised codons previously identified being left unchanged during subsequent steps. The method can be used for expression of proteins. The present sequence is the human GM-CSF wild-type coding sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             TCTGAAACGTTTGACGCCGAGGAGCTGACATGCCTGCAGACTCGCCTGAAGCTGTACAAA 240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This invention describes a novel process for modifying nucleic acid for a vectored expression modulation by targeted insertion or removal of CpG dinucleotides. The invention also describes modified nucleic acids and vector expressions. The process commences with the expression from tissue of a sample substance containing the target nucleic acid sequence, followed by its modification to increase or decrease the genetic expression of CpG di-nucleotides present, by degeneration of the genetic code. The modified target nucleic acid sequence is cloned with the operationally linked with a suitable transcription regulatory sequence. The modified target nucleic acid sequence is then expressed in a modified target nucleic acid sequence is then expressed in a modified for incorporation in a vectored expression in e.g. transgenic animals, medical therapy or vaccines. The process extends the usable range of

                                                                                                                                                                                                            The present sequence encodes a cat GM-CSF protein. The specification describes the capsid proteins of feline calcivitus (FCV) strain 431 and strain G1. Cappsid proteins, derived from the FCV strains G1 and 431, induce antibodies that neutralize a wide variety of strains from different parts of the world. Vectors contening capsid encoding sequences are used as immunogenic compositions or vaccines for protection of cats against feline calcivirus, including use in multivalent vaccines

thuman pathogens and/or their components or human tumour calls and human pathogens and/or their components or human tumour calls and human peripheral blood lymphocytes. Also claimed is a vaccine comprising a cell codified to express an artigen and an immune-modulating protein, this is preferably an expression vector comprising a polynucleotide sequence that canceds the antigen and immune-modulating protein. Such vectors can be used to treat a subject having a tumour by transferring the expression vector into the tumour so that the antigen and the immune-modulator are expressed by at least the tumour. The methods can be used for producing and evaluating vaccines including cancer vaccines and vaccines directed against human pathogens, e.g. HIV, Leishmania, Mycobacterium, Listeria or Plasmodium. This sequence is an intermediate retroviral vector derived from pluMs, a vector approved for clinical use in the United States. pluL is essentially pluL6 digested with Call and Boll to remove cloning sites and the pluL6 internal Syneo gene. These were replaced with a polylinker.

CS Aneo gene was then inserted under the transcriptional control of the Sy40 enhancer/promoter to create the vector pluN. Two primers (AAV83185, AAV83186) were used to amplify the granulocyte macrophage colony

CS stimulating factor (GM-CSF) gene (AAV83189) for its insertion into pLSN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       180

The invention relates to a novel DNA vaccine against pathogens that affect pets and sports animals comprises a plasmid containing a sequence, expressible in vivo, that encodes an immunogen from the relevant pathogen and a cationic lipid containing a quaternary ammonium salt, particularly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       quaternary

                                                                                                                                                                                                                                                                                                                                                                             the secretion of a heterologous protein from insect cells. The protein is expressed as a fusion protein, and is encoded by a polynucleotide comprising, in the 5' to 3' direction, a promoter, a signal peptide, an insect secretion competent polypeptide which is not an immunoglobulin For region and a heterologous protein with the coding sequences linked in frame. The expression cassette and vector are used for the production of heterologous peptides and proteins in insect and mammalian cell. The present sequence encodes a human granulocyte macrophage colony stimulating factor (GMCSF) (a secretion component). It is used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   120

The invention relates to a cell-free, in vitro method of remodeling a peptide. The method involves removing a saccharyl subunit from the peptide. The method involves removing a saccharyl subunit from the peptide. The method involves removing a saccharyl subunit from the copy and with at least one glycosyl ransferase and at least one glycosyl donor under conditions suitable to transfer at least one glycosyl donor to the truncated glycan, thus remodeling the peptide. Conjugates can be formed between a granulocyte colony stimulating factor (G-CSS) peptide, interferon alpha peptide, interferon beta peptide, Factor VIIa peptide, conterferon gamma peptide, alpha-l-protease inhibitor (A-PI) peptide, interferon-gamma peptide, alpha-l-protease inhibitor (A-PI) peptide, interfleukin-2 (IL-2) peptide, Factor VIII peptide, TNFalpha creceptor/immunoglobulin (Ig) of fusion peptide, urokinase peptide, anti-copportein IIb/III monoclonal antibody peptide, chimeric anti-HBR2 antibody peptide, anti-respiratory syncytial virus (RsV) F peptide, anti-copone antibody peptide, and a modifying group, where the modifying group is covalently attached to the peptide (HBSAG), human growth correspondent to the peptide (Hrough an interd glycosyl linking group. The method is useful for a cell-free, in vitro method of remodeling the above mentioned peptides. The present sequence represents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                        Remodeling a peptide, by removing a saccharyl subunit from the peptide to form truncated glycan, and adding or deleting glycosyl groups to a peptide and/or adding modifying group of a peptide to remodel the

This invention relates to novel erythropoietin (EPO) peptides and the remodelling and glycoconjugation of these naturally occurring peptides thereof. Specifically, each EPO peptide comprises one or more glycans and has a glycoconjugate molecule such as polyethylene glycol (PEG) attached to it. Accordingly, the present invention provides glycoPEGylated EPO peptides that have either monoantennary, biantennary or triantennary glycans covalently attached thereto. As such, these peptides are useful for the treatment of anaemia, and hence exhibit antianaemic activities working to increase haematocrit levels in mammals, in particular in

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 462, P

/note="Organ: lung; Vector: pT7T3D-Pac1; Plasmid DNA from the normalized library NCI_CGAP_Lu5 was prepared, and sscircles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCF amplified CDNAs from a pool of 5,000 clones made from the same library (cloneIDs 1414920-1417991 and 1520904-1522439). Subtraction by Bento
